02 • WHAT

What

An AI shopping assistant that finds the best price across online platforms and nearby local vendors — in one search.

Made with Emergent

You ask naturally

Type what you want — just like texting a friend. No filters, no categories, no drop-downs.

02

AI reads intent

Your query is parsed for product, location, and preference in milliseconds.

03

Searched everywhere

Online marketplaces and local vendors near you are queried simultaneously.

04

Results ranked

Price, delivery time, and availability are scored and compared intelligently.

05

Best deal found

One clear recommendation — the best value option, online or around the corner.

03 • WHY

Why

The cheapest option is often invisible to most buyers. The market is fragmented, local stores don't exist digitally, and no tool has connected both worlds — until now.

Made with Emergent

5+

APPS CHECKED BEFORE ONE PURCHASE

Shopping is fragmented

The average buyer opens multiple apps before deciding. The comparison is manual, slow, and still misses half the market.

67%

OF INDIAN RETAIL IS OFFLINE

Local stores are invisible

More than half of all retail in India happens in physical stores — yet they appear in zero digital shopping experiences.

15–30%

CHEAPER AT LOCAL STORES

You're probably overpaying

Local vendors regularly undercut e-commerce prices on everyday items. Without a tool to surface them, most buyers never know.

1

SEARCH. BOTH WORLDS.

One intelligence layer was missing

No product has ever bridged online platforms and nearby local stores in a single intelligent search. Until now.
